

Environmental Sustainable Development(ESD) *Ecospecifier Global Certified Professional*

Utilising the latest training from Ecospecifier Global, we are able to offer an enhanced understanding of ESD in practice and the processes by which Green Building products and materials are rated and specified.

Many companies are now realising the economic and social benefits to sourcing green solutions. A surprise to many is that you can with the correct material selections build at the same or at very low additional cost a green building with enhanced leasing value and or eventual sale of a future proof building

We offer

- An intergrated design process to material selection and procurement for your current or next build. We do this by being your consultant to the design team at the early stages of the scoping study.
- Assistance in formulating any tender documents to reflect your desire to have a green building
- Life Cycle Analysis (LCA) and Thinking (LCT) is also available to further enhance your commitment to the environment.

We cover

- ▶ Integrated Design Processes
- ▶ Delivering Streamlined Sustainability Compliance
- ▶ Building the Sustainability Rating
- ▶ Assistance Allocating Priorities in Specifying Materials
- ▶ Assistance in Selecting the Right Design Team
- ▶ Assistance Greening the Tender Process
- ▶ Simplifying Life Cycle Analysis
- ▶ Embodied Energy and Embodied Carbon
- ▶ Assistance in Understanding Ecolabels
- ▶ Fees Schedule available on request
