

Green Star Sustainability Rating

Green Star Accredited Professional (GSAP)

Utilising the latest training from Green Building Council Australia, we are able to offer an enhanced understanding of why and how you can have your new or existing building green star rated, using an internationally recognised certification system.

Many companies are now realising the economic and social benefits of having their building green star rated

A surprise to many is that you can with the correct material selections build at the same or at very low additional cost a green star rated building with enhanced leasing value and or eventual sale of a future proof building.

We offer

In a consultative manner the frame work and knowledge required to present an integrated design process and the necessary documents to obtain a star rating.

We do this by being your consultant to the design team at the early stages of the scoping study or when major refurbishment is intended.

We will guide you through the process and with our additional qualifications in thermal energy rating and sustainability of buildings a comprehensive submission would be produced.

A project team that includes an Accredited Professional from the beginning of the project, will receive two points towards the project's Green Star score.

Why Have a Green Star Rating

- ▶ lower operating costs
- ▶ higher return on investment
- ▶ attract and retain tenants
- ▶ enhanced marketability
- ▶ productivity benefits
- ▶ reduced liability and risk
- ▶ healthier places to live and work
- ▶ demonstration of Corporate Social Responsibility
- ▶ future-proofed assets
- ▶ competitive advantage
