

Life Cycle Design (LCD) *etoolLCD Certified Consultant*

Utilising the latest training from etool, we are able to offer an enhanced understanding of LCD in practice and the processes by which your building is assessed and specified.

Many companies are now realising the economic and social benefits to obtaining a life cycle designed building.

A surprise to many is that you can, with the correct material selections build at the same or at very low additional cost a sustainable building with enhanced leasing value and or eventual sale of a future proof building.

We offer

For Proposed Buildings

- An intergrated design process to assess your requirements for a sustainable building
- Recommendations to enhance the sustainability of the building with cost analysis
- We do this by being your consultant to the design team at the early stages of the scoping study.

For Existing Buildings

- A full assessment of the building as a base design and
- Recommendations to enhance the sustainability of the building with cost analysis
